Thank you for choosing TRS!

You prepped your home. We heat treated it and got rid of the infestation. Now it's up to you to avoid another infestation.

Here are the things you need to do.

- **Take the clothes you walked out of the home with prior to the heat service and put them directly in the dryer for 30 minutes on high heat. Put on clothes that were in the treatment area or laundered and placed in a bag prior to the heat service. This is very important!**
- **Any items that were bagged up prior to the heat service without being laundered must be taken to a laundromat, laundered, and placed in “new” plastic bags or laundry baskets. Do not put clean clothes in bags that had bed bugs in them!**
- **In the future, when you come home from being out in public, put your clothes and coats in the dryer for 30 minutes on high heat. At this point you are still trying to figure out where the bed bugs came from. (Work, a public place, a friend's house)**
- **When people visit your home have them change into clothes that have been through a dryer. This one can be more difficult, but anyone can bring a bed bug into your house and get an infestation started again.**
